Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 28- 54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Castle USPN 5261874 in view of Ahmad et al. USPN 58588959. Castle describes an extra-corporeal blood access sensing, and radiation method and apparatus comprising at least one blood treatment unit 1, at least one access branch 2 extending between an area where blood is collected from a patient and the treatment unit, at least one peristaltic pump 3, and at least one return branch 4 extending between the treatment

unit and an area where the blood is returned to the patient, and at least one control unit

8. The apparatus further comprises at least a first sensor 5, a least a second sensor 6.

Castle does not teach a memory unit as claimed. Ahmad teaches a computer comprising a microprocessor circuit comprising a microprocessor, memory, control and analog-to digital interface circuits, a temperature measurement and interface circuit, a patient interface circuit, and peripheral interface, and a communication device for the benefit of controlling and/or changing the temperature of the blood returning to the patient (Ahmad col. 4, line 49 through col. 5, line 30). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the invention of Castle with a temperature control means for the benefits taught in Ahmad.
